Specification

The substitute specification filed 10 July 2003 has not been entered because it does not conform to 37 CFR 1.125(b) and (c) because: the statement as to a lack of new matter under 37 CFR 1.125(b) is missing.

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-5 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Audit et al., US Patent 5,370,711A, for reasons of record.

Audit et al. disclose a wound battery comprising offset anode and cathode plates with interposed separators. (See Fig. 4, reference numbers 48, 46, 50 and column 10, lines 32-43). The separator is a nonconductive, or insulating material. (See column 9, lines 24-34). It is noted that the "offset areas" disclosed by Audit et al. are identical to the "protrusions of electrodes" recited by the applicants. The sides of the electrode windings disclosed by Audit et al. press against a "current collector" having "protrusions". (Note Figs. 1b, 6a and 6b and column 11, lines 51-67.) A comparison of applicants' Fig. 7 and Audit et al. Fig. 1b show the "current collector" having "protrusions" disclosed by Audit et al. is identical to the "terminal" with a "contact extending part" recited by applicants.

Art Unit: 1745

The O-rings (78) shown by Audit et al. are located between the battery housing and the anode and cathode materials. One of ordinary skill in the art would know o-rings are elastomeric materials designed to seal by deformation, and are designed to adjust deformation based on applied pressure. Therefore, one of ordinary skill in the art would understand o-rings are "pressure adjusting means". Because o-rings are designed to operate by being compressed into a groove, they are also considered "rubber packings". (Note page 2482 of 26th Edition Machinery's Handbook, Oberg et al., Industrial Press, Inc., 2000.)

Claim Rejections - 35 USC § 103

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Audit et al., for reasons of record.

Audit et al. disclose applicants' invention essentially as claimed, with the exception that Audit et al. do not discuss the compositions of the offset regions of the electrode windings and the compositions of the current collectors. However, it would have been obvious to one of ordinary skill in the art to use the same materials for the anode and the anode terminal, and the same material for the cathode and the cathode terminal because these combinations of material will decrease extraneous galvanic reactions within cells.

Art Unit: 1745

Allowable Subject Matter

Claims 6, 7, and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Applicants' remarks filed 10 July 2003 regarding these claims are considered persuasive.

Claims 12-and 15-22 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: The nearest prior art of Audit et al. fails to suggest incorporating an anti-explosive valve on the battery current collector/contact terminal.

Incorporating such a feature into the current collector of Audit et al. would appear to result in less mechanical and electrical contact between electrode plates and current collectors, and is therefore not considered to be an obvious modification of the Audit et al. invention.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire

THREE MONTHS from the mailing date of this action. In the event a first reply is

Art Unit: 1745

filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carol Chaney whose telephone number is (703) 305-3777. The examiner can normally be reached on Mon - Fri 8:00am-4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on 703-308-2383. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.
